# What Is The ScaleStart Package?

Our ScaleStart package is designed for owners of pet lizards to help ensure all aspects of their health and wellbeing are being managed and catered for.

The first few months with any new pet can be daunting, so this package will give you peace of mind while providing your lizard with premium veterinary care. This is an all-inclusive package made for lizard owners.

## Comprehensive Health Check & Husbandry Assessment

The key to your lizard's health starts with their environment and diet. As each species of reptile has different requirements, our vets will assess these in detail and work with you to achieve the best enclosure and diet for your species. Reptiles are masters of hiding their illness. In the ScaleStart package a complete physical exam will be performed by our experienced reptile vets.

## Sex Identification

Knowing the sex of your lizard can be an important part of keeping these reptiles. It can give valuable insight into behaviour and medical aspects of your pet. The ScaleStart program includes the sex identification of your lizard once they are old enough to be accurately sexed.

## Faecal Testing

Many reptiles are carriers of internal parasites. Left undiagnosed and untreated, these parasites can cause severe illness. Early detection and intervention is essential for your lizard's health. For this reason, a faecal analysis is included in the ScaleStart package.

## Radiography (X-ray)

A common problem encountered in our pet lizards is reduced bone density. A full body radiograph to check for abnormalities is included in this package.

Includes

## Microchipping & Registration

Microchip identification is a safe and highly effective means of identifying your pet. Microchips enable lost reptiles to be reunited with their owner and offers a way to permanently identify your lizard. Microchip implantation and lifetime registration on a national database is included in the package.

## UVB Light Testing

The quality and function of your lizard's UVB light is an essential component to their health and wellbeing. As part of the program, we offer testing of your current UVB light setup to ensure proper function and output within your lizard's enclosure.

\*Not all of our locations have the ability to undertake UVB light testing; it is a free included extra for those clinics that can offer it.

## Viral or Pathogen Test

Reptile viruses are a growing concern in our pet lizards. Reptiles can carry these viruses for years before they show any signs of infection. Different lizards carry different viruses. The package includes testing for the most likely virus your species of lizard may carry.

## Nails and Food or Supplement

Our captive lizards often get overgrown nails in the captive environment, as they have less space and opportunity to climb. As part of the package, we will clip your lizard's nails if required and send them home with a special bag of food or a supplement.
